

## Mounting the cruciform of a Vespa PX

Open circlip (part no 151970). Remove gear cogs. Note the order! SIP-TIP: Tie together with cable ties.

Unscrew the selector rod (left-hand thread!)

Thread the new cruciform. Attention, there's a cut-out at a groove on Lusso models to turn in the cruciform.

SIP-TIP: Punch mark the selector rod to avoid that the cruciform comes loose unintentionally.

Put gear cogs in correct order on the main shaft. See mounting instructions at gear box technology chapter.

Insert spacer to compensate axial clearance. Recommended clearance 0.1-0.4mm. Use a feeler gauge part no 608240.
