

General Information

Paint-sticks are meant to help doctor the smaller scratches and other similar minor damage to your scooters paintwork. In the case of larger areas needing repair we recommend the use of our range of aerosol cans, containing most available original PIAGGIO colours!

Before initial use test the compatibility of the paint in the stick with your paintwork on a neutral or hidden area of your scooter.

Sometimes an extra layer of clear lacquer paint must be applied to complete the repair, depending on your type of paint. Metallic paint requires a specific type of clear lacquer, matt paint another to display the paint to full effect.

Deep scratches and other more extensive damage can be treated by applying repeated layers of paint, from the stick, slowly filling out the damaged area. Allow the paint to dry between applications.

These paint-sticks should be stored in a completely dry area, away from direct sunlight and other heat sources.

For best results, use at temperatures between 15° and 25° C.

Use in a draught and dust free environment, with sufficient ventilation!
